

Emergency Response Team as a Service

Solution Summary

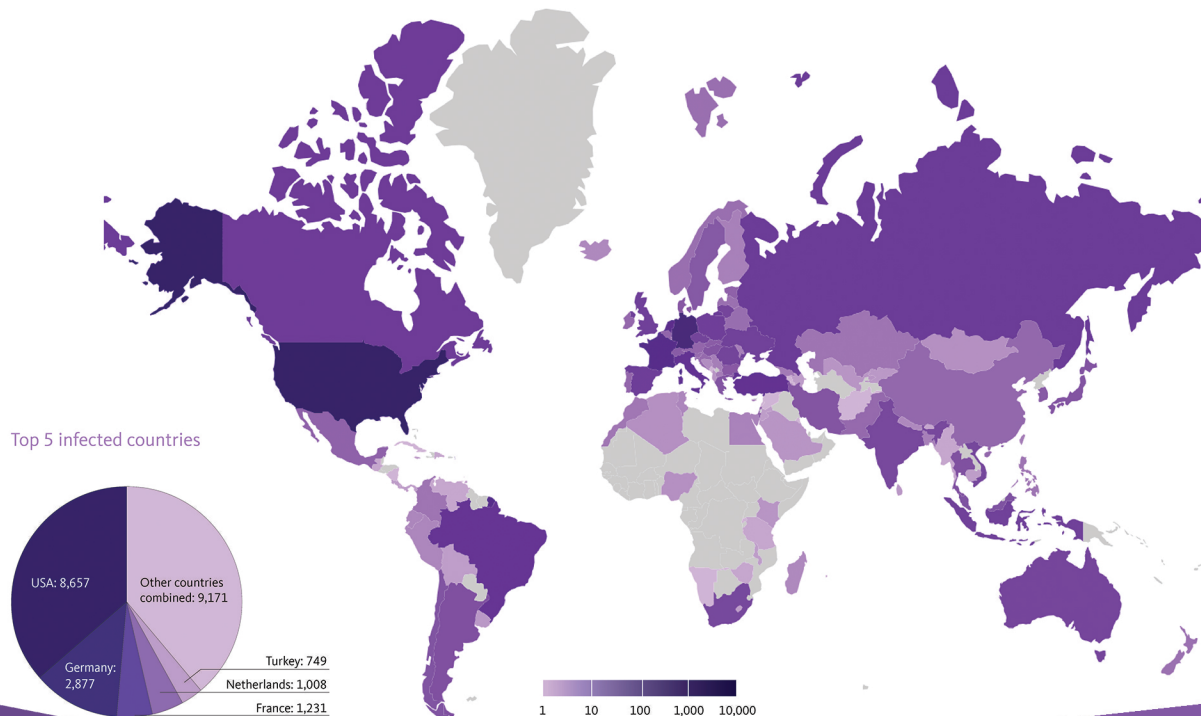

LIFARS understands that each day your business is at risk, opportunities are lost. As a result, we work to respond with our on-call service to guarantee that time is minimized between communicating the problem and resolving the issue.

Expert Experience at Your Fingertips

LIFARS' Incident Response Team provides industry experts to any incident or suspected breach that may occur. Our 24/7 availability and immediate deployment gives organizations the confidence to know that they can depend on LIFARS at all times. With fast remote support or an in person, on site review, LIFARS will be there to help. In addition, with our new mobile app, LIFARS support can respond to emergencies even faster.

Flexible and Fully Utilized Solutions

Having a response team on call will save your organization plenty of money. This is because the team only works when there is an incident or a need, giving companies a holistic, fully utilized response team for less than a single full-time employee. With a 100% work time helping to save companies during no-incident periods, they can use that to forward the business and rest assured that if a problem arises, our team is there.

Other Solutions Available:

- Data Breach Response
- Digital Forensics
- Threat Intelligence
- Penetration Testing
- Infrastructure Hardening
- Network Monitoring
- Emergency Response Team
- Database and Web Application Security
- Compromise Assessment Test
- Cybersecurity and Compliance
- Mobile Application Security

About LIFARS

LIFARS is a New York City based digital forensics and cybersecurity intelligence firm. At LIFARS, we believe that cybersecurity is a matter of trust. Our solutions are based on best practices and personal hands-on experiences. LIFARS continuously explores the latest innovations in the cybersecurity field and always seeks to find what is shaping tomorrow's industry landscape.

Ranked as the #2 cybersecurity firm in New York City on the Cybersecurity 500 list.

Data Breach Loss Minimized

By ensuring your company has a team on call, under contract, with an understanding of your environment, and a personal relationship with your company, the time needed to respond to an incident will be greatly reduced. And time is money. By having a team already prepared for an incident at any moment, there is no scrambling for companies when a breach occurs - no more chaotic "who do we call?" panics. Just a simple call, email, or an app button-press away.

Pre-paid protection helps prevent hacks or limit their size and scope. Often, we have seen breaches shortly after they occur, stopping them before major damage took place. This regularly saves 90% of the cost of a breach.

Increased Cybersecurity Maturity

Before any incident occurs, LIFARS' team conducts a Cybersecurity Maturity Assessment to determine the current breach readiness, environment hardiness, and ensures there has been no compromise already. This helps companies to minimize an incident by getting all the documentation, planning, and preparation done before an incident occurs. It also helps to minimize damages by improving the security levels within your organization so it can withstand a breach or an attempted breach.

Cyber Attack Motivation
